

November challenge: Eat Whole Grains

Eating grains, especially whole grains, provides health benefits. People who eat whole grains as part of a healthy diet have a reduced risk of some chronic diseases. Grains provide many nutrients that are vital for the health and maintenance of our bodies.

Tips to help you eat whole grains:

- To eat more whole grains, substitute a whole-grain product for a refined product – such as eating whole-wheat bread instead of white bread or brown rice instead of white rice. It's important to *substitute* the whole-grain product for the refined one, rather than *adding* the whole-grain product.
- For a change, try brown rice or whole-wheat pasta. Try brown rice stuffing in baked green peppers or tomatoes and whole-wheat macaroni in macaroni and cheese.
- Use whole grains in mixed dishes, such as barley in vegetable soup or stews and bulgur wheat in a casserole or stir-fry.
- Create a whole grain pilaf with a mixture of barley, wild rice, brown rice, broth and spices. For a special touch, stir in toasted nuts or chopped dried fruit.
- Experiment by substituting whole wheat or oat flour for up to half of the flour in pancake, waffle, muffin or other flour-based recipes. They may need a bit more leavening.
- Use whole-grain bread or cracker crumbs in meatloaf.
- Try rolled oats or a crushed, unsweetened whole grain cereal as breading for baked chicken, fish, veal cutlets, or eggplant parmesan.
- Try an unsweetened, whole grain ready-to-eat cereal as croutons in salad or in place of crackers with soup.
- Freeze leftover cooked brown rice, bulgur, or barley. Heat and serve it later as a quick side dish.

The Challenge:

In the month of November, eat more whole grains each week by trying four of the above ideas. This should be done (eating more whole grains) each week in November.

If you have met the above challenge and ate more whole grains each week in November by trying four of the above ideas, please complete below and turn in to your Eat Well, Work Well site coordinator by November 30th.

I (print name) _____ attest that I successfully ate more whole grains each week in November by trying four of the above ideas.

Signature: _____

Food label tips on next page...

What to look for on the food label:

- Choose foods that name one of the following whole-grain ingredients first on the label's ingredient list:

Whole grain ingredients	
<ul style="list-style-type: none">• brown rice• buckwheat• bulgur• millet• oatmeal• popcorn• quinoa• rolled oats	<ul style="list-style-type: none">• whole-grain barley• whole-grain corn• whole-grain sorghum• whole-grain triticale• whole oats• whole rye• whole wheat• wild rice

- Foods labeled with the words "multi-grain," "stone-ground," "100% wheat," "cracked wheat," "seven-grain," or "bran" are usually not whole-grain products.
- Color is not an indication of a whole grain. Bread can be brown because of molasses or other added ingredients. Read the ingredient list to see if it is a whole grain.
- Use the [Nutrition Facts label](#) and choose whole grain products with a higher % Daily Value (% DV) for fiber. Many, but not all, whole grain products are good or excellent sources of fiber.
- Read the food label's ingredient list. Look for terms that indicate added sugars (such as sucrose, high-fructose corn syrup, honey, malt syrup, maple syrup, molasses, or raw sugar) that add extra calories. Choose foods with fewer added sugars.
- Most sodium in the food supply comes from packaged foods. Similar packaged foods can vary widely in sodium content, including breads. Use the Nutrition Facts label to choose foods with a lower % DV for sodium. Foods with less than 140 mg sodium per serving can be labeled as low sodium foods. Claims such as "low in sodium" or "very low in sodium" on the front of the food label can help you identify foods that contain less salt (or sodium).
